

EPSON Robots

Built to Perform

ABOUT

Epson Robots are the industrial robot of choice for super high precision, high speed, high performance, ease of use and overall value. From the brand's 300+ G-Series robots with repeatabilities down to 5 microns to its unique RS-Series SCARA+ robots, Epson leads the industry in providing a wide variety of selections for your next SCARA robot application. Epson also offers a complete lineup of 6-Axis and Linear Modules.

OVERVIEW

This two-day Epson Robot Programming class will show you how easy it is to program Epson Robots, and how they can work in your specific application and industry. It will also show you the basic setup needed to implement a robot in to your current automation system. This is a hands-on class where you will work with the robot and an expert Robot Engineer, to ensure your full understanding of how simple these technical devices are to work with.

LEARNING OBJECTIVES

- The items needed to operate a robot
- Introduction to the Epson programming language Spel+
- How to program a job
- How to train a robot to perform a task
- Work with the robot to complete a full cycle task
