

# Upcoming Training & Events

## Intro to Machine Vision Workshop

This free 1-day workshop teaches you how to reduce costs and improve the efficiency of your factory production line, with an engineered machine vision system in a hands-on training environment.

You will also learn the fundamentals of machine vision and see the latest of it from Cognex, the leader in machine vision. Bring your own parts, and we can discuss your application in class.

[July 25 in Spring Hill, TN](#)

## Collaborative Robot Workshops

This innovative type of robots will enhance your manufacturing process by working side by side with your employees.

Universal Robots' built-in force-sensing allows this to happen with no danger to employees. These safe, collaborative robots are perfect to take over when there is a mundane, dirty, dangerous, dull, or strenuous task that is normally performed by a human.

MiR (Mobile Industrial Robots) are also collaborative, and can independently transport materials, while navigating safely around objects and people. They can also be mounted with customized top modules such as bins, racks, lifts, conveyors or even a Universal Robot.

We welcome you to attend our free 1-day workshop to learn all about how these robots can work for your specific application and industry.
